

Dear Hiring Team,

My name is Ioannis-Nikiforos Bourlis (You can call me John) and I am a 24-year-old graduate with a degree in Informatics and Telecommunications. I have a solid background in Java development, having built multiple projects, including complex plugins for Minecraft servers, using the Spigot API, where I designed GUIs, event-driven systems, and custom mechanics.

Additionally, I have also experimented with Spring Boot, and I am currently building a real-time file handling system using Spring Boot with embedded databases, which has helped me learn more about backend architecture and data management.

For my thesis, I developed an AI system designed to assist visually impaired individuals by detecting and identifying real-world objects. I trained and evaluated object detection models using the COCO dataset and implemented the system using TensorFlow, Keras, and OpenCV to perform real-time visual recognition.

In another Machine Learning project, I developed a prediction model project where I analyzed historical numerical datasets and applied machine learning techniques to generate predictions, focusing on data processing, model training, and evaluation in Python.

My main goal is to learn, grow, and contribute to meaningful projects while developing my career as a software engineer. Regarding compensation, I am flexible and would prioritize the opportunity to gain experience and collaborate with your team.

I am currently based in Almyros, Greece. However, I am open to relocating to the company's premises if required for the role.

Thank you for taking the time to read this cover letter. If you have any questions, I am open to discuss them with you further.

Best Regards,
Ioannis-Nikiforos Bourlis
